THE ARIAL[®] MOBILE APP

INNOVATIVE ALARM HANDLING AND MESSAGING TOOL
CUSTOM-DESIGNED FOR SENIOR LIVING COMMUNITIES

STANLEY Healthcare's Arial® Mobile App

A COST-EFFECTIVE STAFF COMMUNICATION TOOL FOR DELIVERING HIGH-QUALITY CARE

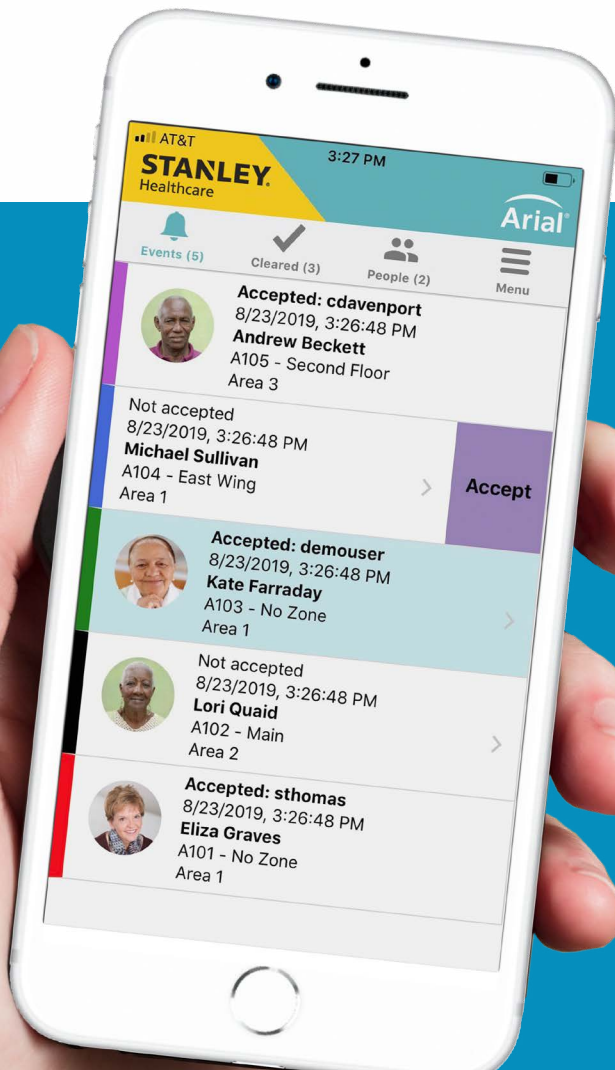

STANLEY Healthcare's Arial Mobile App is designed to work seamlessly with the Arial Emergency Call platform, providing senior living caregivers with an innovative alarm handling and messaging tool for communicating with co-workers.

It's packed with intuitive features to ensure caregivers have visibility into all relevant alarms, their status and who is responding. Designed to operate over a Wi-Fi network, the Arial Mobile App features:

- **Simple visual controls:** Caregivers can see all alerts at a glance, with images to help with identification and color coding to understand status and priority.
- **Smoother workflow:** Caregivers can document actions right in the app, selecting from a list or entering custom notes. The app also supports smarter call escalation by automatically routing alerts to available staff.

- **Better care coordination:** The app shows when a caregiver has accepted an alert so other staff members can continue with their duties. Should assistance be required, the app supports text communication between staff with a live directory of staff members currently on shift.
- **New insights for improving resident experience:** The Arial App makes it possible to measure the "encounter time" between a caregiver and resident, by measuring the time from the caregiver resetting the alarm to completing the event in the Arial App.

The Arial Mobile App is available for Apple iOS and Android mobile operating systems. It continues a string of innovations in the Arial platform that redefine essential functionality for emergency call, including the Arial Management Dashboard, integration of other life safety systems such as fire panels, and support for new input devices.

*“We have found the **Arial App** to be a big improvement on previous staff notification devices. The app makes it easier for the caregiver to effectively respond to resident calls. It allows team members to communicate who will respond; this feature helps us improve individual care planning based on the reasons a resident calls for help. We are able to anticipate and meet resident needs while improving resident safety and satisfaction.”*
