## Support Elements

Learn about each part of the support services available to you and your community.

### 24/7 TECHNICAL SUPPORT

Around-the-clock live support 365 days a year—we have established multiple worldwide support centers that offer direct access to expert engineers at any time to accelerate resolution of advanced support issues to your satisfaction.

### TECHNICAL SUPPORT REMOTE ACCESS TO ARIAL® SYSTEM

Remote support allows our expert technical support engineers to access your Arial system to help diagnose issues and resolve them. We understand the challenges of trying to have step-by-step instructions explained over the phone. Remove those challenges and Technical Support will remote into your system and do the work themselves. *INTERNET CONNECTIVITY IS REQUIRED.*

### ARIAL SOFTWARE UPGRADES

Both minor updates and major upgrades are included in all our support packages for software-based solutions, so that you always have access to the latest features and functionality to extend the capabilities of your solution. If the upgrade can be done remotely, we will schedule and execute it with you, no charge!

### KNOWLEDGEBASE SUPPORT PORTAL ACCESS

The online Support Community provides direct access to a wide variety of information and services, including user documentation, articles and downloads; self-service ticketing for a support request or a Return Material Authorization (RMA); and a peer discussion forum.

### HEALTHSTREAM ONLINE EDUCATION

We understand the challenge of ever-changing staff. STANLEY Healthcare Online University provides on-demand online classes, enabling quick and consistent new staff training, as well as keeping existing staff up to date on your solution. There is no limit on the number of staff and times classes can be taken. If your community utilizes another Learning Management System, Healthstream can directly integrate ensuring the latest curriculum is available to staff.

### DISCOUNTED SERVICE RATES

If remote support is unable to fix the issue within our target service level goals, STANLEY Healthcare will dispatch a certified technician based on the severity of the issue\* to investigate and restore system service. (Please note that replacement of components not under warranty are not covered by the Onsite Repair Service.)

### ANNUAL REMOTE TRAINING & SYSTEM INSPECTION

STANLEY Healthcare will coordinate a time with you when a certified technician will remotely access your community's Arial system to perform a comprehensive system inspection once a year. If any problems are identified, the technician will work with you to resolve the matter immediately or develop a plan to address any larger issues. All findings are detailed in a SalesForce Ticket attached to the customer account.

## Comprehensive Onsite Staff Training

The right training is key to a successful resident safety solution. STANLEY Healthcare can provide onsite training to key groups to start you off on the right foot:

- Care Staff Training
- Administrator Training
- Maintenance Staff Training

Give your staff the knowledge they need to succeed through comprehensive, in-person training from a STANLEY Healthcare expert.

**ANNUAL ONSITE SYSTEM INSPECTION**

STANLEY Healthcare will send a certified technician to your community to perform a comprehensive system inspection once a year. If any problems are identified, the technician will work with you to resolve the matter immediately or develop a plan to address any larger issues. All findings are detailed in a Facility Visit Report for ongoing reference.

**ANNUAL ONSITE STAFF TRAINING**

When the STANLEY Healthcare technician is onsite for your Community Inspection, your staff will have the opportunity to receive additional technical training. Targeted toward system administrators and managers, this onsite technical training goes into greater depth than our Online Education courses on how to correctly manage the system and use reports and other advanced tools to maintain and monitor system activities and staff compliance to your community's standards.

**ANNUAL ONSITE SOFTWARE UPDATE**

During the Onsite Community Inspection, our technician will check your software and make sure that it is up to the latest standard. Any available updates will be installed, and your system fully tested to make sure that everything is working properly.

**ADVANCED REPLACEMENT PROGRAM**

Should you ever encounter difficulty with a component of one of your STANLEY Healthcare systems, the Advanced Replacement Program can help your community significantly minimize both the duration of the outage and the costs to replace component. STANLEY Healthcare will send you a replacement product that can be installed to help you quickly restore your system to working order. The broken component can later be returned to STANLEY for substantial credit that offsets most of the cost of the replacement component.

**About STANLEY Healthcare**

STANLEY Healthcare, part of the Securitas family, empowers caregivers to deliver connected, productive, and safe care. Our innovative portfolio of solutions helps hospitals, clinics, and senior living organizations protect people, use their assets efficiently, and understand their operations for a caring and healing environment.
